

Dear Friend,

We at Islander Campers have much pleasure in enclosing the requested information on our hard top slide on campers.

Superior quality, strength, finish and choice are some of the most important points covered in this letter.

Our base model floor dimensions for a 2.3 metre base slide on are 2300mm x 2050mm. The base model floor dimensions for a 2.5 metre base slide on are 2500mm x 2050mm. The base model floor dimensions for a 3.0 metre base slide on are 3000mm x 2150mm. The internal height (average taken floor to ceiling) is 2000mm and the bed area is 2000mm x 1400mm in these slide on models. The approximate dimensions of a shower in the 3.0 metre slide on are 1000mm x 750mm. A swivel Thetford cassette toilet is fitted in this shower. The configuration of internal cupboards, seating and appliances is flexible in most slide on campers and may be positioned to suit your personal needs. Please note that the bed dimensions do allow a double size mattress 4'6" x 6'2" and plenty of head room to sit up in bed.

Our new method of manufacturing slide on and built on campers is the sandwich panel. The panel consists of a fibreglass interior and exterior skin with an insulating structural core.

Unlike most other manufactured panels or moulded fibreglass units, our panel has no fibreglass odour due to the method with which it is manufactured.

The panels are exceptionally strong, lightweight, easily repairable and impervious to water damage therefore creating a far superior product to what was previously available, or what almost all other manufacturers currently use. Our panel is not just a fibreglass sheet covering a frame or ply sheeting.

The problems of frame fracture, rot, rust and oxidation are now a thing of the past, it is impossible for these common manufacturing deficiencies to occur using our panel.

Our **aerodynamic design** and structure is unique to Islander Campers and adds to the overall strength and aesthetic look of the camper.

If you wish to put a 3-metre slide on camper on a standard size utility, the chassis (wheel base) requires extending. The cost varies between 2 and 4 wheel drives and could be anywhere between \$1500.00 and \$2,500.00 plus engineers modification plate fees (Approx. \$500.00). We can provide this service, upon request.

Please note an additional cost will be incurred for vehicles over standard hurdle height, as extra material is required.

When purchasing a vehicle please note that a King Cab or Space Cab may vary the size of the slide on camper we are legally permitted to place on the vehicle. In the event that you require a Space Cab or King Cab vehicle, please feel free to enquire about the

lengthening of the chassis to allow a standard size slide on camper to be correctly fitted, or the Jumbuck 2.3 metre model, which does fit most extra cab or super cab flat tray utilities.

Enclosed is a comprehensive list. This list is used to alter or add to your camper. For example, if you required a full oven instead of the two burner and grill (which is in the base model), you would simply tick the appropriate box which allows us to give you an exact cost of your camper. In the event you require an addition that is not on the options list, please feel free to list the requirement under the extra's heading.

Our customers have the option of choosing their own colour scheme, which includes vinyl, cushion and curtain material, laminates (benches etc.) and trim. Another option is to guide us in your preferred colour tones, and then we may coordinate the colour schemes on your behalf.

Our basic cost includes Hijacker individual hydraulic lifting legs. Each leg is capable of lifting 2000lb and is extremely easy to operate as well as requiring less maintenance and a reduced chance of future problems to repair. A comprehensive list of spare parts is available and the legs are quite simple to repair, if required.

The total dry weight for the 2.5 metre base slide on camper is approximately 790Kg and the total dry weight for the 3.0 metre base slide on camper is approximately 1100Kg including all fittings, legs, shower, steps etc. Any options fitted may increase the overall weight.

Our slide on campers can be fitted to any flat tray vehicle, either two or four wheel drive, **and the cost of fitting and wiring the camper is included in the base cost.**

We at Islander Campers take pride in our workmanship and therefore offer a three year warranty with all our hard top units. We are always open to new ideas or suggestions and look forward to any challenge.

With this in mind we sincerely look forward to being of assistance to you with your slide on camper requirements. If you would like any further information or wish to inspect one of our completed units, please do not hesitate to contact us.

Yours faithfully

Danny Gower
